# Stoneville Activities

EMPHASIZE THE VAST SCIENCE OF AGRICULTURE

● A familiar landmark at Stoneville Pedigreed Seed Company is its office and administration building, shown above.

On Stoneville Pedigreed Seed Company's own experimental plantation, all activities are centered around just one goal . . . the development of the best planting seed which science and agriculture can produce. Nothing is knowingly left undone in the continuing effort to produce pedigreed seeds of the highest quality.

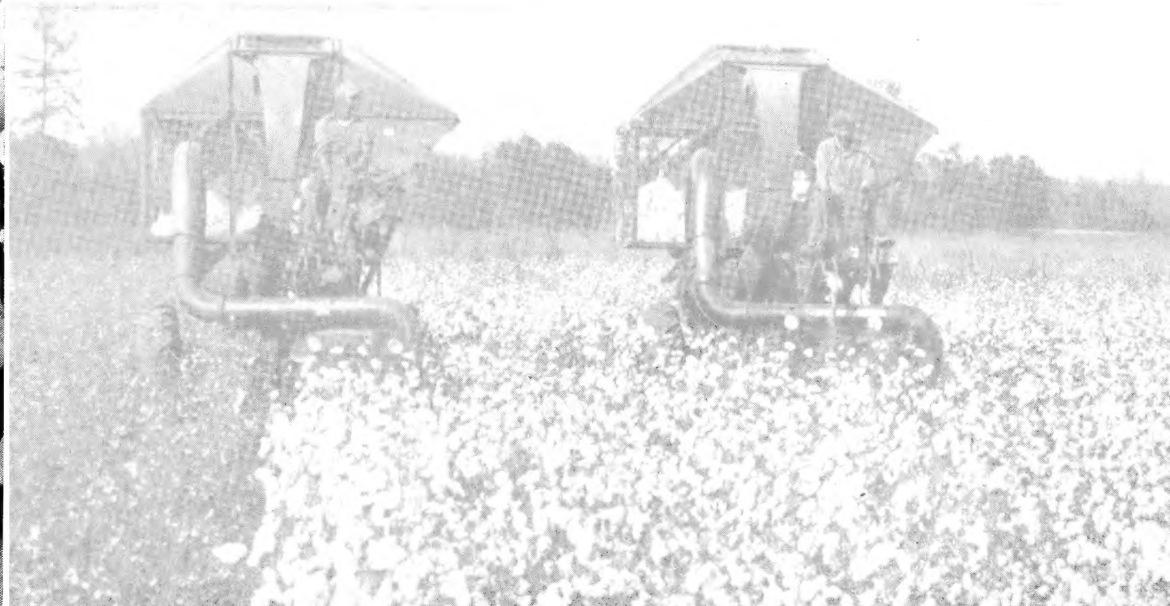

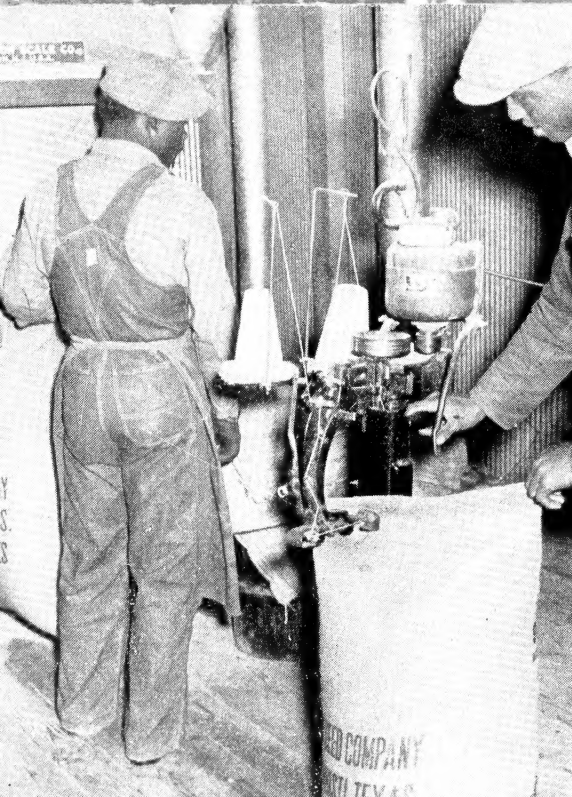

Today, Stoneville is one of the most copied cottonseed on the market. In fact eight commercial varieties of cotton on

the market today are selections of an early Stoneville 2-B strain.

In addition to its research staff, Stoneville Pedigreed Seed Company has gins for checking gin turnout and for testing other ginning characteristics of Stoneville cotton. Other facilities include a delinting plant, warehouse, railroad spurs and a main office building (shown in the photograph at left).

## KING OF LONG-STAPLE VALLEY COTTONS

Greater productivity . . . on rich alluvial land, no cotton seed is more productive than our famous Delfos 9169. It is the ideal variety for the good valley lands. Experimental Station tests repeatedly show that Delfos 9169 produces more lint cotton per acre, and with the highest oil content seed. Its growth and maturity characteristics appeal to the farmer.

## COMBINES HIGH GIN TURNOUT WITH LIGHT FOLIAGE

High gin turnout . . . ranging from 37 to 39 percent . . . is the important new factor in Stoneville 3202, which is a direct line selection of the long popular Stoneville 5A, so much preferred in sections requiring an early maturing, light foliage variety producing a nice size, easy picking boll. You will be pleased with its improved characteristics.

# STONEVILLE ON DEER CREEK

G. B. WALKER

G. B. Walker, founder and president of the Stoneville Pedigreed Seed Co., Stoneville, Miss., is known around the world for his development of these famous Stoneville and Delfos cottons.

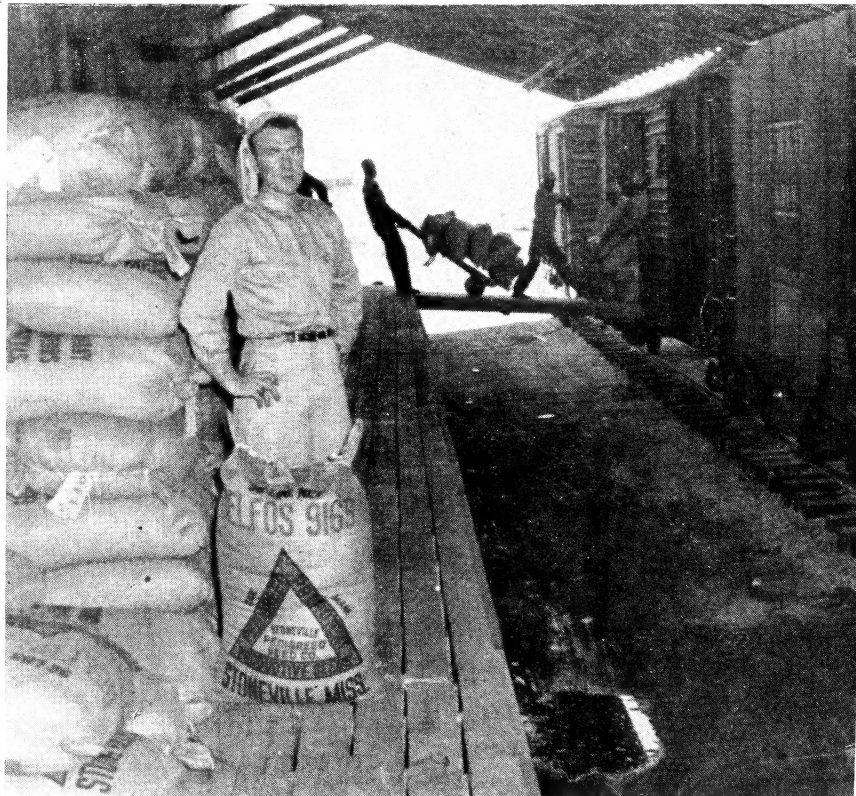

Located on Deer Creek in the heart of Mississippi's rich, cotton-growing Delta, Stoneville Pedigreed Seed Company has dedicated its resources and personnel to the important job of developing the highest quality pedigreed cotton seeds.

An outstanding research staff composed of C. A. Tate, Dr. George Rea Walker and Dr. J. Winston Neely, is constantly busy developing, testing, and improving foundation strains. From these registered breeder's foundation stocks, the company supervises the growth of increase lots in order to produce these seeds in large quantities.

Today, Stoneville seeds are accepted as the standard of excellence in every cotton-producing state in the Union, as well as in many foreign countries.

● (ABOVE) Stoneville Pedigreed Seed Company's research staff. Left to right, Dr. J. Winston Neely, plant breeder and geneticist; Dr. George Rea Walker, plant breeder and general manager; and Mr. C. A. Tate, plant breeder and production manager.

● (BELOW) Although Stoneville Pedigreed Seed Company's cottons are not hybrids, constant research in hybridization is carried on in order to keep abreast of developments along these lines.
